

SQL Data Analysis – Project 3

DecodeLabs | Batch 2026

Overview

E-commerce dataset ka SQL analysis jisme filtering, grouping, aur aggregations use ki gayi hain.

Database Setup

```
create database decode labs;  
use decode labs;
```

Queries & Results

View All Data

```
select * from datatbl;
```

2 Filter — Online Payments Only

```
select * from datatbl where  
PaymentMethod='Online';
```

3 Filter — Pending Orders Only

```
select * from datatbl where  
OrderStatus='Pending';
```

4 Round Decimal Values

```
update datatbl  
set UnitPrice = ROUND(UnitPrice, 2),  
    TotalPrice = ROUND(TotalPrice, 2);
```

5 Count Total Phone Sales

```
select count(Product) as TotalPhonesell  
from datatbl  
where Product='Phone';
```

6 Count Tablets & Total Tablet Revenue

```
select count(Product) as TotalTablets,  
       sum(TotalPrice) as  
TotalpriceofTablet  
from datatbl  
where Product='Tablet';
```

7 Total Quantity & Revenue per Product

```
select Product,  
       sum(Quantity) as TotalQnt,  
       sum(TotalPrice) as Totalprice  
from datatbl  
group by product;
```

8 Average Price per Product

```
select product,  
       avg(TotalPrice) as avgprice  
from datatbl  
group by product;
```

9 Orders Between 2023–2024 (Sorted by Date)

```
select * from datatbl
where date between '2023-01-01' and '2024-01-01'
order by Date asc;
```

Concepts Used

Concept	Usage
SELECT	Data retrieval
WHERE	Row filtering
UPDATE	Modifying data
ORDER BY	Sorting results
GROUP BY	Grouping data
COUNT()	Counting records
SUM()	Total calculations
AVG()	Average calculations
ROUND()	Decimal precision
BETWEEN	Date range filtering

Tech Stack

 SQL Server

 SSMS
